

ANUP KUMAR

Associate Quality Engineer | Software Quality & Automation

+91-8292993851 | anupkumar82929@gmail.com | linkedin.com/in/anup-kumar-126314253 | github.com/anupkumar82929-ops | Bihar, India

PROFESSIONAL SUMMARY

Computer Science & Engineering graduate specializing in Artificial Intelligence and Machine Learning with hands-on experience building Python automation tools and real-time software applications. Strong foundation in C++, Python, Java, and SQL with knowledge of Data Structures & Algorithms, OOP, DBMS, Git, and GitHub. Experienced in developing, validating, debugging, and refining project workflows, with a strong analytical and problem-solving approach demonstrated through 600+ DSA problems on CodeChef. Seeking an Associate Quality Engineer opportunity focused on software quality, test automation, programming, and reliable software delivery.

TECHNICAL SKILLS

Programming Languages: C++, Python, Java, SQL

Software Engineering: Debugging, Problem Solving, Software Validation, Git, GitHub

AI / Machine Learning: Machine Learning, Deep Learning, Computer Vision, OpenCV, Scikit-learn

Automation & Quality Focus: Python task automation, scheduling workflows, validation, debugging, quality-focused development

Web / Databases / Tools: HTML, CSS, JavaScript, React, SQL, DBMS, VS Code

Development Practices: Modular project workflows, model inference, preprocessing pipelines, documentation

PROJECTS

Virtual Study Assistant

- Developed a Python-based virtual assistant for study planning, task management, and productivity workflows.
- Built and validated an interactive Tkinter GUI with automated reminders and scheduling features.
- Designed daily and weekly planning functionality with structured workflows for recurring tasks.

Hand Sign Language Detection System

- Built a real-time sign language recognition application using Python, OpenCV, and deep learning.
- Achieved approximately 90% gesture-classification accuracy through image-processing and model validation workflows.
- Applied preprocessing steps including skin-color segmentation and background subtraction to improve input quality.
- Converted recognized hand gestures into text and speech output, validating end-to-end application behavior.

Pawagent - Dog Identification & Care Assistant

- Built a Python-based machine learning application to identify dogs from images and provide care guidance.
- Implemented an EfficientNet-B0 CNN classifier with image preprocessing and top-k prediction inference.
- Organized training, model loading, inference, and chat-service components into a structured end-to-end workflow.

EDUCATION

Bachelor of Technology (B.Tech) - Computer Science & Engineering, AI & ML

Technocrats Institute of Technology (Excellence) | 2022 - 2026 | CGPA: 7.89

Intermediate (10+2)

St. Paul Senior Secondary School | 2019 - 2021 | 62%

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Computer Vision & Deep Learning (Completed 2026); IBM Certification in Data Science using Python; IBM Certification in Machine Learning

Competitive Programming: Solved 600+ Data Structures & Algorithms problems on CodeChef; 50+ problems on LeetCode focused on optimization, debugging, and logic building

RELEVANT COURSEWORK

Data Structures & Algorithms | Object-Oriented Programming | Database Management Systems

ADDITIONAL INFORMATION

Professional Status: Fresher | Languages: Hindi (Fluent), English (Fluent)
